## Zoning and compartmentalization Not rated

### CHAPTER 4.3. ZONING AND COMPARTMENTALISATION

**Introduction**  
The purpose of this chapter is to provide recommendations on the principles of zoning and compartmentalisation to Member Countries wishing to establish and maintain different subpopulations with specific health status within their territory. These principles should be applied in accordance with the relevant chapters of the Terrestrial Code. This chapter also outlines a process by which trading partners may recognise such subpopulations.

### CHAPTER 4.4. APPLICATION OF COMPARTMENTALISATION

**Introduction and objectives**  
The recommendations in this chapter provide a structured framework for the application and recognition of compartmentalised within countries or zones, based on Chapter 4.3, with the intention to facilitate trade in animals and
